

How To View Total Ratings For A Multiple Response Categorical

Problem

A question is of type **Multiple Response – Categorical** (e.g., ratings of banks on a five point satisfaction scale) and you want to create a net of the total ratings.

Steps to solve

1. In the **Variables and Questions** tab, select the variables you want to combine.
2. Right-click, select **Insert Ready-Made Formula(s)** and **Questions -> Multiple Response – Binary with All Combinations**.
3. View the new question in the tables tab. This will show net ratings for all banks.

Additional reading

Terms shown in italics and bold can be found in the index of the *Q Reference Manual*, the *Quick Start Manual* and via the **Help** menu within Q.

What to do if the problem is not solved

If these instructions are insufficient, please email us (**Help | Email Support...**) with a detailed description of what in the instructions is not working for you and we will either provide you with more comprehensive instructions, or, upon your request, we can do the analysis for you in your file (fees apply) .
